PRODUCT INFORMATION

Chenodeoxycholic Acid-d₄ MaxSpec[®] Standard

Item No. 31366

CAS Registry No.: 99102-69-9

Formal Name: $(3\alpha,5\beta,7\alpha)$ -3,7-dihydroxy-cholan-24-oic-2,2,4,4-d₄ acid

Synonym: CDCA-d₄ MF: C₂₄H₃₆D₄O₄

FW: 396.6 **Purity:** ≥95%

Supplied as: A solution in methanol; in a deactivated glass ampule

Concentration: 100 μg/ml; see certificate of analysis for verified concentration

Storage: -20°C

Stability: ≥2 years; Stability testing is ongoing to ensure concentration accuracy. The certificate of analysis and

product expiry date will be updated upon completion of testing.

Special Conditions: Store upright and unopened at -20°C. Warm to room temperature prior to opening.

Light sensitive.

Description

Chenodeoxycholic acid- d_4 (CDCA- d_4) is intended for use as an internal standard for the quantification of CDCA (Item No. 10011286) by GC- or LC-MS. CDCA is a hydrophobic primary bile acid. It is formed from cholesterol in the liver via a multistep process catalyzed by the cytochrome P450 (CYP) isoforms CYP7A1, CYP8B1, and CYP27A1. CDCA is a farnesoid X receptor (FXR) agonist that binds to FXRs in a TR-FRET assay $(EC_{50} = 13 \mu M)$ and induces FXR transactivation in a reporter assay.^{2,3} It induces transcription of the gene encoding the Nrf2 target glutamate cysteine ligase (GCL) in primary hepatocytes and HepG2 cells when used at concentrations ranging from 25 to 100 μM.⁴

CDCA-d₄ MaxSpec[®] standard is a quantitative grade standard of CDCA-d₄ (Item No. 20848) that has been prepared specifically for mass spectrometry or any application where quantitative reproducibility is required. The solution has been prepared gravimetrically and is supplied in a deactivated glass ampule sealed under argon. The concentration was verified by comparison to an independently prepared calibration standard. This CDCA-d₄ MaxSpec® standard is guaranteed to meet identity, purity, stability, and concentration specifications and is provided with a batch-specific certificate of analysis. Ongoing stability testing is performed to ensure the concentration remains accurate throughout the shelf life of the product. Note: The amount of solution added to the vial is in excess of the listed amount. Therefore, it is necessary to accurately measure volumes for preparation of calibration standards. Follow recommended storage and handling conditions to maintain product quality.
