Laboratory Procedures

GSK2018682 is supplied as a crystalline solid. A stock solution may be made by dissolving the GSK2018682 in the solvent of choice, which should be purged with an inert gas. GSK2018682 is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of GSK2018682 in these solvents is approximately 30 mg/ml.

GSK2018682 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, GSK2018682 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. GSK2018682 has a solubility of approximately 0.25 mg/ml in a 1:3 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

GSK2018682 is an agonist of sphingosine-1-phosphate receptor 1 (S1P₁) and S1P₅.¹ It is selective for S1P₁ and S1P₅ over S1P₂, S1P₃, and S1P₄ receptors. GSK2018682 is efficacious in a mouse model of experimental autoimmune encephalomyelitis (EAE).
