### Laboratory Procedures

AG-556 is supplied as a crystalline solid. A stock solution may be made by dissolving the AG-556 in the solvent of choice, which should be purged with an inert gas. AG-556 is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of AG-556 in these solvents is approximately 30 mg/ml.

### Description

AG-556 is a tyrphostin inhibitor of EGFR (IC<sub>50</sub> = 5 μM).<sup>1</sup> It is selective for EGFR over HER2 (IC<sub>50</sub> = >500 μM). AG-556 inhibits EGF-induced growth of HER14 cells (IC<sub>50</sub> = 3 μM). It inhibits hydrogen peroxide-induced increases in intracellular calcium in HEK293 cells expressing human transient receptor potential melastatin 2 (TRPM2; IC<sub>50</sub> = 0.94 μM), as well as HEK293 cells expressing human TRP ankyrin 1 (TRPA1) when used at a concentration of 3 μM.<sup>2</sup> AG-556 (200 μg/animal per day) reduces the incidence, severity, and duration of disease in a mouse model of experimental autoimmune encephalomyelitis (EAE).<sup>3</sup> It reduces edema, demyelination, and myeloperoxidase (MPO) activity, a marker of neutrophil infiltration, in spinal cord tissue, as well as improves motor function in a mouse model of extradural compression-induced spinal cord injury when administered at a dose of 10 mg/kg.<sup>4</sup>
