PRODUCT INFORMATION

Kaempferol 3-glucuronide

Item No. 34645

CAS Registry No.: 22688-78-4

Formal Name: 5,7-dihydroxy-2-(4-hydroxyphenyl)-4-

oxo-4H-1-benzopyran-3-yl

β -D-glucopyranosiduronic acid

Synonym: Kaempferol 3-O- β -glucuronide

MF: C₂₁H₁₈O₁₂

FW: 462.4

Purity: $\geq 95\%$

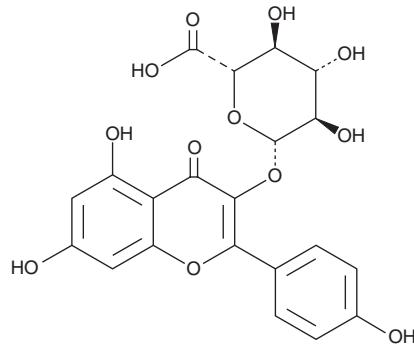

UV/Vis.: λ_{max} : 268, 354 nm

Supplied as: A solid

Storage: -20°C

Stability: ≥ 2 years

Item Origin: Plant/*Styphnolobium japonicum*

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Kaempferol 3-glucuronide is supplied as a solid. A stock solution may be made by dissolving the kaempferol 3-glucuronide in the solvent of choice, which should be purged with an inert gas. Kaempferol 3-glucuronide is soluble in the organic solvent DMSO.

Description

Kaempferol 3-glucuronide is a flavonol glycoside that has been found in *Fragaria* and an active metabolite of kaempferol (Item No. 11852) that has diverse biological activities.¹⁻⁴ It is formed from kaempferol primarily in the small intestine.² Kaempferol 3-glucuronide (0.1, 1, and 10 μ M) induces Akt activity in mouse liver homogenates and increases glucose consumption in HepG2 cells.³ It inhibits the production of reactive oxygen species (ROS) induced by fMLP (Item No. 21495) in isolated human neutrophils when used at concentrations of 1 and 10 μ M.⁴
