Laboratory Procedures

ABT-263-d₈ is intended for use as an internal standard for the quantification of ABT-263 (Item No. 11500) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

ABT-263-d₈ is supplied as a solid. A stock solution may be made by dissolving the ABT-263-d₈ in the solvent of choice, which should be purged with an inert gas. ABT-263-d₈ is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of ABT-263-d₈ in these solvents is approximately 0.5, 25, and 30 mg/ml, respectively.

Description

ABT-263 is an inhibitor of the Bcl-2 family proteins Bcl-2, Bcl-xL, and Bcl-W (K_i s = <1, <0.5, and <1 nM, respectively).¹ It is selective for Bcl-2, Bcl-xL, and Bcl-W over Mcl-1 and A1 (K_i s = 550 and 354 nM, respectively). ABT-263 is cytotoxic in a panel of small cell lung cancer (SCLC), leukemia, and lymphoma cell lines with a mean EC₅₀ value of 1 μM. It induces apoptosis in influenza A-infected retinal pigment epithelial cells (EC₅₀ = 0.08 μM).² ABT-263 (100 mg/kg) induces tumor regression in NCI H146 SCLC and RS4;11 acute lymphocytic leukemia (ALL) mouse xenograft models.^{1,3}
