PRODUCT INFORMATION

Halometasone

Item No. 34848

CAS Registry No.: 50629-82-8
Formal Name: (6 α ,11 β ,16 α)-2-chloro-6,9-difluoro-11,17,21-trihydroxy-16-methylpregna-1,4-diene-3,20-dione
Synonyms: Ba 48401, 2-Chloroflumetasone, C 48401Ba, 2-chloro Flumetasone, Halomethasone

MF: C₂₂H₂₇ClF₂O₅
FW: 444.9
Purity: \geq 98%
Supplied as: A solid
Storage: -20°C
Stability: \geq 2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Halometasone is supplied as a solid. A stock solution may be made by dissolving the halometasone in the solvent of choice, which should be purged with an inert gas. Halometasone is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of halometasone in ethanol is approximately 20 mg/ml and approximately 30 mg/ml in DMSO and DMF.

Halometasone is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, halometasone should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. Halometasone has a solubility of approximately 0.25 mg/ml in a 1:3 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

Halometasone is a synthetic corticosteroid.^{1,2} Formulations containing halometasone have been used in the treatment of psoriasis vulgaris and eczematous dermatoses.
