Laboratory Procedures

Fulvestrant 9-sulfone is supplied as a solid. A stock solution may be made by dissolving the fulvestrant 9-sulfone in the solvent of choice, which should be purged with an inert gas. Fulvestrant 9-sulfone is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of fulvestrant 9-sulfone in DMF is approximately 30 mg/ml and approximately 10 mg/ml in ethanol and DMSO.

Description

Fulvestrant 9-sulfone is an estrogen receptor antagonist and a derivative of the selective estrogen receptor degrader (SERD) fulvestrant (Item No. 10011269).¹ It binds to estrogen receptor α (ER α) and ER β and inhibits estrogen-induced gene expression in a reporter assay in Ishikawa endometrial cells expressing an estrogen response element (ERE) reporter when used at concentrations ranging from 0.1 to 100 μ M.
