PRODUCT INFORMATION

Y-33075

Item No. 35108

CAS Registry No.: 199433-58-4
Formal Name: 4-[(1R)-1-aminoethyl]-N-1H-pyrrolo[2,3-b]pyridin-4-yl-benzamide
Synonyms: RKI-983, SNJ-1656, Y-39983
MF: C₁₆H₁₆N₄O
FW: 280.3
Purity: ≥98%
Supplied as: A solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Y-33075 is supplied as a solid. A stock solution may be made by dissolving the Y-33075 in the solvent of choice, which should be purged with an inert gas. Y-33075 is soluble in DMSO.

Description

Y-33075 is an inhibitor of Rho-associated kinase 2 (ROCK2; IC₅₀ = 3.6 nM).¹ It is selective for ROCK2 over PKC and calcium/calmodulin-dependent protein kinase II (CaMKII; IC₅₀s = 420 and 810 nM, respectively). Topical application of Y-33075 (0.05% v/v) reduces intraocular pressure in rabbit and cynomolgus monkeys. Y-33075 (10 and 100 μM) increases axonal regeneration at the crush site in a cat model of surgically-induced optic nerve damage.² It also inhibits demyelination and reduces the incidence of relapse episodes in a mouse model of chronic relapsing experimental autoimmune encephalomyelitis (EAE).³
