Laboratory Procedures

Pentapeptide-3 (acetate) is supplied as a solid. A stock solution may be made by dissolving the pentapeptide-3 (acetate) in the solvent of choice, which should be purged with an inert gas. Pentapeptide-3 (acetate) is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of pentapeptide-3 (acetate) in these solvents is approximately 10 mg/ml.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of pentapeptide-3 (acetate) can be prepared by directly dissolving the solid in aqueous buffers. The solubility of pentapeptide-3 (acetate) in PBS (pH 7.2) is approximately 5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

Pentapeptide-3 is a cosmeceutical peptide and pentapeptide fragment of the temple viper (*T. wagleri*) venom peptide Waglerin-1.¹ It is an antagonist of nicotinic acetylcholine receptors (nAChRs).²
