PRODUCT INFORMATION

1-Methylxanthine

Item No. 35245

CAS Registry No.: 6136-37-4
Formal Name: 3,9-dihydro-1-methyl-1H-purine-2,6-dione
Synonyms: 1-MTX, 1-MX
MF: C₆H₆N₄O₂
FW: 166.1
Purity: ≥98%
UV/Vis.: λ_{max}: 267 nm
Supplied as: A solid
Storage: -20°C
Stability: ≥4 years
Item Origin: Synthetic

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

1-Methylxanthine is supplied as a solid. A stock solution may be made by dissolving the 1-methylxanthine in the solvent of choice, which should be purged with an inert gas. 1-Methylxanthine is slightly soluble in DMSO. It is also slightly soluble in water.

Description

1-Methylxanthine is an active metabolite of caffeine (Item No. 14118).^{1,2} It enhances ionizing radiation-induced DNA double-strand break formation in RKO colorectal cancer cells when used at a concentration of 3 mM.¹ 1-Methylxanthine (100 μM) inhibits the uptake of 6-carboxyfluorescein (Item No. 21233) in CHO cells overexpressing human organic anion transporter 1 (OAT1).² It has also been used as a biomarker of caffeine consumption.³
