Laboratory Procedures

BI-3406 is supplied as a solid. A stock solution may be made by dissolving the BI-3406 in the solvent of choice, which should be purged with an inert gas. BI-3406 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of BI-3406 in these solvents is 10, 2, and 3 mg/ml, respectively.

Description

BI-3406 is an inhibitor of the protein-protein interaction between K-Ras and the guanine nucleotide exchange factor son of sevenless homolog 1 (SOS1; IC₅₀ = 5 nM).¹ It selectively disrupts the protein-protein interaction between K-Ras^{G12C} or K-Ras^{G12D} with SOS1 over SOS2, and it is selective over 321 kinases in a panel at 10 μM but does inhibit PLK4, BMPR2, and LRRK2 activity by greater than 50%. BI-3406 inhibits the growth of DLD-1, A549, NCI H23, and NCI H358 cells expressing mutant K-Ras (IC₅₀s = 16-52 nM) but not NCI H520 and A375 cells expressing wild-type K-Ras. BI-3406 (12 or 50 mg/kg, twice per day) reduces tumor growth in an MIA PaCa-2 mouse xenograft model.
