### Laboratory Procedures

Glycolithocholic acid 3-sulfate (sodium salt) is supplied as a solid. A stock solution may be made by dissolving the glycolithocholic acid 3-sulfate (sodium salt) in the solvent of choice, which should be purged with an inert gas. Glycolithocholic acid 3-sulfate (sodium salt) is slightly soluble in methanol.

Glycolithocholic acid 3-sulfate (sodium salt) is slightly soluble in aqueous solutions. To enhance aqueous solubility, dilute the organic solvent solution into aqueous buffers or isotonic saline. If performing biological experiments, ensure the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

### Description

Glycolithocholic acid 3-sulfate is a metabolite of glycolithocholic acid (Item Nos. 21723 | 20273).<sup>1</sup> It is formed from glycolithocholic acid by hepatocytes.<sup>2</sup> Glycolithocholic acid 3-sulfate (240  $\mu$ mol/kg) induces cholestasis and increases biliary cholesterol secretion in rats.<sup>3</sup> Serum glycolithocholic acid 3-sulfate levels are increased in patients with cirrhosis, hepatitis, or cholestasis.<sup>4</sup>
