### Laboratory Procedures

Ivermectin-d<sub>2</sub> is intended for use as an internal standard for the quantification of ivermectin (Item No. 35518) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Ivermectin-d<sub>2</sub> is supplied as a solid. A stock solution may be made by dissolving the ivermectin-d<sub>2</sub> in the solvent of choice, which should be purged with an inert gas. Ivermectin-d<sub>2</sub> is slightly soluble in chloroform, DMSO, and methanol.

### Description

Ivermectin is a mixture of the anthelmintics ivermectin B<sub>1a</sub> (Item No. 18768) and ivermectin B<sub>1b</sub> (Item No. 23824).<sup>1</sup> Formulations containing ivermectin have been used in the treatment of parasitic roundworm infections.
