Laboratory Procedures

Hydrocortisone aceponate is supplied as a solid. A stock solution may be made by dissolving the hydrocortisone aceponate in the solvent of choice, which should be purged with an inert gas. Hydrocortisone aceponate is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of hydrocortisone aceponate in DMF is approximately 3 mg/ml and approximately 10 mg/ml in ethanol and DMSO.

Description

Hydrocortisone aceponate is a corticosteroid.^{1,2} Topical application of hydrocortisone aceponate (0.0584%) reduces lesion size and pruritis in cats with allergic dermatitis.¹ It also induces remission and increases time to relapse in dogs with spontaneous atopic dermatitis.² Formulations containing hydrocortisone aceponate have been used in the treatment of veterinary dermatoses.
