### Laboratory Procedures

Myelin oligodendrocyte glycoprotein (MOG) (35-55) (mouse, rat) (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the MOG (35-55) (mouse, rat) (trifluoroacetate salt) in water. We do not recommend storing the aqueous solution for more than one day.

### Description

MOG (35-55) is an antigen peptide of MOG, a protein involved in demyelinating CNS disorders.<sup>1,2</sup> MOG (35-55) in combination with heat-killed *M. tuberculosis* and complete Freund's adjuvant (CFA) induces demyelination of the spinal cord, degeneration of the optic nerve, and visual impairments in mice.<sup>1</sup> Immunization with MOG (35-55) in combination with adjuvants has been used to induce experimental autoimmune encephalomyelitis (EAE) in animal models of multiple sclerosis.<sup>1,2</sup>
