Laboratory Procedures

TSPC is supplied as a solid. A stock solution may be made by dissolving the TSPC in the solvent of choice, which should be purged with an inert gas. TSPC is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of TSPC in these solvents is approximately 3 mg/ml.

Description

TSPC is an inhibitor of the gibberellin receptor *GID1*.¹ It inhibits the gibberellin-induced interaction between the gibberellin receptor *GID1* and a negative regulator of its signaling, *DELLA*, in a yeast two-hybrid assay (IC₅₀ = <30 μM) and gibberellin binding to *GID1* in the presence or absence of *DELLA* in a cell-free assay when used at concentrations ranging from 1 to 100 μM. TSPC (10-100 μM) suppresses seed germination and seedling growth in *Arabidopsis*.
