Laboratory Procedures

GNF-362 is supplied as a solid. A stock solution may be made by dissolving the GNF-362 in the solvent of choice, which should be purged with an inert gas. GNF-362 is soluble in DMSO, ethanol, and methanol.

Description

GNF-362 is an inositol triphosphate 3 kinase (ITPK) inhibitor (IC₅₀s = 20, 9, and 19 nM for ITPKA, ITPKB, and ITPKC, respectively).¹ It induces calcium influx in isolated mouse splenocytes (EC₅₀ = 12 nM). *In vivo*, GNF-362 (10 and 25 mg/kg) reduces the number of thymic CD4⁺ T cells in mice. It also reduces inflammatory cell infiltration, joint erosion, and proteoglycan loss, in a rat model of antigen-induced arthritis when administered at a dose of 20 mg/kg.
