Laboratory Procedures

GCN2-IN-1 is supplied as a crystalline solid. A stock solution may be made by dissolving the GCN2-IN-1 in the solvent of choice, which should be purged with an inert gas. GCN2-IN-1 is soluble in DMSO.

Description

GCN2-IN-1 is an inhibitor of general control nonderepressible 2 kinase (GCN2; IC₅₀ = ~0.2 μM for autophosphorylation), a serine/threonine protein kinase involved in the integrated stress response.¹ It also inhibits integrase phosphorylation (IC₅₀ = ~0.2 μM for the HIV-1 enzyme). GCN2-IN-1 inhibits ELAV-like protein 1, also known as human antigen R (HuR), protein dimerization (IC₅₀ = 4.5 μM).² GCN2-IN-1 also decreases the viability of U251, XD456, U87, and LN-229 glioma cells (IC₅₀s = 4.7, 2.8, 3.2, and 2.7 μM, respectively).
