Laboratory Procedures

Dofetilide N-oxide is supplied as a solid. A stock solution may be made by dissolving the dofetilide N-oxide in the solvent of choice, which should be purged with an inert gas. Dofetilide N-oxide is soluble in the organic solvent DMSO at a concentration of approximately 1 mg/ml.

Description

Dofetilide N-oxide is a metabolite of the antiarrhythmic agent dofetilide (Item No. 15045).¹ It prolongs intracellular action potential duration in isolated guinea pig papillary muscle, as a measure of antiarrhythmic activity, less potently than dofetilide.
