PRODUCT INFORMATION

Valtrate

Item No. 36522

CAS Registry No.: 18296-44-1
Formal Name: butanoic acid, 3-methyl-1'-
[[1S,2'R,6S,7aS)-4-[(acetyloxy)methyl]-
6,7a-dihydrospiro[cyclopenta[c]pyran-
7(1H),2'-oxirane]-1,6-diyl]ester

Synonym: Halazuchrome B

MF: C₂₂H₃₀O₈

FW: 422.5

Purity: ≥98%

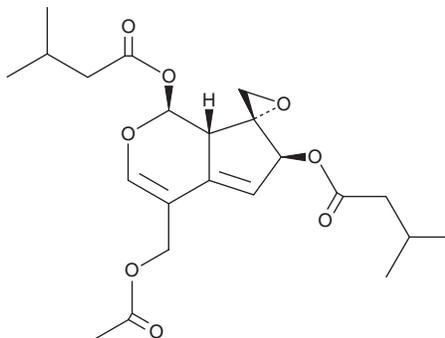

UV/Vis.: λ_{max}: 256 nm

Supplied as: A solution in chloroform

Storage: -20°C

Stability: ≥2 years

Item Origin: Plant/*Valeriana officinalis* L.

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Valtrate is supplied as a solution in chloroform. To change the solvent, simply evaporate the chloroform under a gentle stream of nitrogen and immediately add the solvent of choice. Valtrate is soluble in DMSO. Valtrate is slightly soluble in methanol.

Description

Valtrate is a valepotriate that has been found in *Valeriana* and has diverse biological activities.¹⁻³ It inhibits nuclear export of influenza virus ribonucleoprotein complex (vRNP) in HeLa cells when used at a concentration of 3.6 μM and inhibits influenza virus infection in MDCK cells (IC₅₀ = 0.19 μM).¹ Valtrate is cytotoxic to GLC-4 lung and COLO 320 colorectal cancer cells (IC₅₀s = 1.4 and 3 μM, respectively).² It increases the number of entries into, and percentage of time spent in, the open arms of the elevated plus maze, indicating anxiolytic-like activity, and decreases serum corticosterone levels in rats when administered at a dose of 10 mg/kg.³
