PRODUCT INFORMATION

3-Aminosalicylic Acid

Item No. 36543

CAS Registry No.: 570-23-0
Formal Name: 3-amino-2-hydroxy-benzoic acid
Synonyms: 3-ASA, NSC 285111
MF: C₇H₇NO₃
FW: 153.1
Purity: ≥98%
UV/Vis.: λ_{max}: 224 nm
Supplied as: A solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

3-Aminosalicylic acid is supplied as a solid. A stock solution may be made by dissolving the 3-aminosalicylic acid in the solvent of choice, which should be purged with an inert gas. 3-Aminosalicylic acid is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of 3-aminosalicylic acid in these solvents is approximately 1 and 2 mg/ml, respectively.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of 3-aminosalicylic acid can be prepared by directly dissolving the solid in aqueous buffers. The solubility of 3-aminosalicylic acid in PBS (pH 7.2) is approximately 1 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description

3-Aminosalicylic acid is a salicylic acid derivative and potential impurity in commercial preparations of 5-aminosalicylic acid.^{1,2} It protects against apoptosis, as well as reverses reductions in mitochondrial complex I, also known as NADH dehydrogenase, activity and increases in reactive oxygen species (ROS) production induced by manganese in SK-N-MC cells when used at a concentration of 1 μM.¹
