Laboratory Procedures

Supinoxin is supplied as a solid. A stock solution may be made by dissolving the Supinoxin in the solvent of choice, which should be purged with an inert gas. Supinoxin is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of Supinoxin in these solvents is approximately 10 and 25 mg/ml, respectively.

Description

Supinoxin is an inhibitor of Y593-phosphorylated DEAD-box helicase 5 (DDX5).¹ It binds to Y593-phosphorylated DDX5 ($K_d = \sim 19$ nM), but does not interact with unphosphorylated DDX5, and selectively inhibits β -catenin-dependent ATPase activity over RNA-dependent ATPase activity at 0.2 μ M. Supinoxin induces apoptosis in MDA-MB-231 cells ($IC_{50} = 12$ nM) and inhibits cell growth in SK-MEL-28 cells ($IC_{50} = 20$ nM).
