Laboratory Procedures

C-87 is supplied as a solid. A stock solution may be made by dissolving the C-87 in the solvent of choice, which should be purged with an inert gas. C-87 is soluble in the organic solvent DMSO at a concentration of approximately 10 mg/ml (warmed and sonicated).

Description

C-87 is an inhibitor of TNF-α.¹ It binds to TNF-α and reduces the levels of phosphorylated JNK, prevents TNF-α-induced IκBα degradation, and inhibits TNF-α-induced cytotoxicity (IC₅₀ = 8.73 μM) in L-929 cells. It reduces liver inflammation and injury, as well as increases survival, in a mouse model of acute hepatitis induced by LPS and galactosamine (GalN) when administered at a dose of 12.5 mg/kg.
