### Laboratory Procedures

LQZ-7I is supplied as a solid. A stock solution may be made by dissolving the LQZ-7I in the solvent of choice, which should be purged with an inert gas. LQZ-7I is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of LQZ-7I in these solvents is approximately 1, 2, and 5 mg/ml, respectively.

### Description

LQZ-7I is an inhibitor of survivin.<sup>1</sup> It inhibits survivin dimerization in a secreted alkaline phosphatase (SEAP) assay using DU145 prostate cancer cells expressing survivin and induces survivin degradation in C4-2 and PC3 prostate cancer cells in a proteasome-dependent manner. LQZ-7I is cytotoxic to C4-2 and PC3 cells (IC<sub>50</sub>s = 3.1 and 4.8 μM, respectively). It reduces tumor growth in a PC3 mouse xenograft model when administered at a dose of 100 mg/kg.
