Laboratory Procedures

Miltirone is supplied as a solid. A stock solution may be made by dissolving the miltirone in the solvent of choice, which should be purged with an inert gas. Miltirone is soluble in chloroform and ethyl acetate.

Description

Miltirone is a tanshinone that has been found in *S. miltiorrhiza* and has diverse biological activities.¹⁻⁵ It protects lard from thermal oxidation when used at a concentration of 0.02%.¹ Miltirone is a partial agonist of the benzodiazepine receptor (IC₅₀ = 0.3 μM).² It inhibits carboxylesterase 2 (CES2; K_i = 0.04 μM) as well as severe acute respiratory syndrome coronavirus (SARS-CoV) main protease (M^{pro}), also known as 3C-like protease (3CL^{pro}), and papain-like protease (PL^{pro}; IC₅₀s = 21.1 and 30 μM, respectively).^{3,4} Miltirone is cytotoxic to HCT116 colon cancer cells (IC₅₀ = 4.27 μM) and induces mitochondrial dysfunction and the production of reactive oxygen species (ROS) in the same cells.⁵ *In vivo*, miltirone (10-60 mg/kg) increases the number of punished crossings in the four-plate test, indicating tranquilizing activity, in mice.²
