# PRODUCT INFORMATION

## Akt Substrate (trifluoroacetate salt)

Item No. 36759

**Formal Name:** L-arginyl-L-prolyl-L-arginyl-L-alanyl-L-alanyl-L-threonyl-L-phenylalanine, trifluoroacetate salt  
**Synonym:** RPRAATF  
**MF:** C<sub>36</sub>H<sub>59</sub>N<sub>13</sub>O<sub>9</sub> • XCF<sub>3</sub>COOH  
**FW:** 817.9  
**Purity:** ≥98%  
**Supplied as:** A solid  
**Storage:** -20°C  
**Stability:** ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Akt substrate (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the Akt substrate (trifluoroacetate salt) in the solvent of choice, which should be purged with an inert gas. Akt substrate (trifluoroacetate salt) is soluble in the organic solvent DMSO at a concentration of approximately 10 mg/ml.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of Akt substrate (trifluoroacetate salt) can be prepared by directly dissolving the solid in aqueous buffers. The solubility of Akt substrate (trifluoroacetate salt) in PBS (pH 7.2) is approximately 5 mg/ml. We do not recommend storing the aqueous solution for more than one day.

### Description

Akt substrate is a peptide substrate for Akt, a serine/threonine kinase involved in various cellular processes such as proliferation, viability, angiogenesis, and glucose metabolism.<sup>1</sup> It has been used as a target substrate for the quantification of Akt activity.
