Laboratory Procedures

Gastric inhibitory peptide 1 (GIP-1) (3-42) (human) (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the GIP-1 (3-42) (human) (trifluoroacetate salt) in water. We do not recommend storing the aqueous solution for more than one day.

Description

GIP-1 (3-42) is a peptide fragment of the incretin hormone GIP (Item No. 25004) and a GIP receptor antagonist.¹ It is formed from GIP by serum dipeptidyl peptidase 4 (DDP-4). GIP-1 (3-42) (100 nM) reduces insulin secretion from BRIN-BD11 pancreatic cells. It increases plasma glucose levels and decreases plasma insulin levels in an *ob/ob* mouse model of diabetes when administered at a dose of 25 nmol/kg.
