### Laboratory Procedures

Gastric inhibitory peptide (GIP) (22-51) (human) (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the GIP (22-51) in water. We do not recommend storing the aqueous solution for more than one day.

### Description

GIP (22-51) is a pro-atherogenic 30-amino acid peptide corresponding to residues 22-51 of the GIP precursor protein proGIP that has been found in human plasma.<sup>1</sup> It induces I $\kappa$ B- $\alpha$  degradation and NF- $\kappa$ B nuclear translocation in macrophage-differentiated THP-1 cells and isolated human aortic endothelial cells when used at a concentration of 1  $\mu$ M. *In vivo*, GIP (22-51) increases atherosclerotic lesion area and plaque formation in ApoE<sup>-/-</sup> mice.
