Laboratory Procedures

1H,1H,2H,2H-Perfluorohexanesulfonic acid is supplied as a solid. A stock solution may be made by dissolving the 1H,1H,2H,2H-perfluorohexanesulfonic acid in the solvent of choice, which should be purged with an inert gas. 1H,1H,2H,2H-Perfluorohexanesulfonic acid is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of 1H,1H,2H,2H-perfluorohexanesulfonic acid in these solvents is approximately 10 mg/ml.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of 1H,1H,2H,2H-perfluorohexanesulfonic acid can be prepared by directly dissolving the solid in aqueous buffers. The solubility of 1H,1H,2H,2H-perfluorohexanesulfonic acid in PBS (pH 7.2) is approximately 10 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description
