### Laboratory Procedures

Tat-M2NX (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the Tat-M2NX (trifluoroacetate salt) in water. We do not recommend storing the aqueous solution for more than one day.

### Description

Tat-M2NX is a peptide antagonist of transient receptor potential melastatin 2 (TRPM2).<sup>1</sup> It inhibits hydrogen peroxide-induced calcium influx in HEK293 cells expressing human TRPM2 when used at concentrations ranging from 25 to 100 μM. *In vivo*, Tat-M2NX (20 mg/kg) reduces brain infarct volume in male, but not female, mice in a model of stroke induced by middle cerebral artery occlusion (MCAO) when administered prior to or 3 hours-post occlusion.
