Description

113-O12B is a disulfide bond-containing ionizable cationic lipidoid.¹ It has been used in the generation of lipid nanoparticles (LNPs) for the delivery of mRNA. Subcutaneous administration of LNPs containing 113-O12B and encapsulating an mRNA reporter accumulate specifically in mouse lymph nodes. LNPs containing 113-O12B and encapsulating mRNA encoding ovalbumin reduce tumor growth and increase the number of tumoral CD8⁺ T cells, M1-like macrophages, and activated dendritic cells in an ovalbumin-expressing B16/F10 murine melanoma model.
