Description

Rp-ATP-α-S is an isomer of the sulfur-containing nucleotide derivative ATP-α-S and an agonist of the purinergic P2Y₁ receptor.¹ It increases calcium mobilization in HEK293 cells expressing the human P2Y₁ receptor (EC₅₀ = 75 nM). Rp-ATP-α-S binds to washed isolated human platelets (K_i = 156 nM), inhibits ADP-induced aggregation of isolated human platelet-rich plasma (PRP; pA₂ = 4.74), and inhibits cAMP production induced by prostaglandin E₁ (PGE₁; Item No. 13010) in isolated human PRP (pA₂ = 5.26).^{1,2} It also induces relaxation of carbamoylcholine-precontracted guinea pig taenia coli strips (EC₅₀ = 56 nM).³ Rp-ATP-α-S has been used in the synthesis of cyclic dinucleotides that are recognized by bacterial riboswitches.⁴
