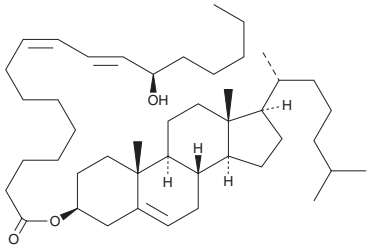
PRODUCT INFORMATION

13(R)-HODE cholesteryl ester

Item No. 38606

CAS Registry No.: 330800-94-7
Formal Name: 13R-hydroxy-9Z,11E-octadecadienoic acid, cholesteryl ester
MF: $C_{45}H_{76}O_3$
FW: 665.1
Purity: ≥98%
UV/Vis.: λ_{max}: 234 nm ε: 23,000
Supplied as: A solution in ethanol
Storage: -20°C
Stability: As supplied, 1 year from the QC date provided on the Certificate of Analysis, when stored properly



Laboratory Procedures

13(R)-HODE cholesteryl ester is supplied as a solution in ethanol. To change the solvent, simply evaporate the ethanol under a gentle stream of nitrogen and immediately add the solvent of choice. Solvents such as DMSO and dimethyl formamide purged with an inert gas can be used. The solubility of 13(R)-HODE cholesteryl ester in these solvents is approximately 50 mg/ml.

13(R)-HODE cholesteryl ester is sparingly soluble (<20 µg/ml in PBS pH 7.2) in aqueous buffers. Therefore, further dilutions of the organic solvent solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Store aqueous solutions of 13(R)-HODE cholesteryl ester on ice and use within 12 hours of preparation. We do not recommend storing the aqueous solution for more than one day.

Description

13(R)-HODE cholesteryl ester was originally extracted from atherosclerotic lesions.[1] It remains uncertain whether the oxidized fatty acid portion of the molecule results from enzymatic lipoxygenation or from random lipid peroxidation.[2] 13(R)-HODE cholesteryl ester can be used as a standard for analysis of chiral HODE cholesteryl esters.
