### Description

AA-T3A-C12 is an ionizable cationic lipidoid that contains a polyamine core, tethered to the sigma receptor ligand anisamide, and four 12-carbon tails.<sup>1</sup> It has been used in the generation of lipid nanoparticles (LNPs). LNPs containing AA-T3A-C12 and encapsulating siRNA for *Hsp47*, a molecular chaperone whose expression is increased in liver fibrosis, reduce the expression of *Hsp47* in activated NIH3T3 mouse liver fibroblasts and primary mouse hepatic stellate cells, which both express high levels of the sigma receptor. LNPs containing AA-T3A-C12 and encapsulating *Hsp47* siRNA reduce liver fibrosis induced by carbon tetrachloride (CCl<sub>4</sub>) in mice.
