Laboratory Procedures

Bactobolamine is supplied as a solid. A stock solution may be made by dissolving the bactobolamine in the solvent of choice, which should be purged with an inert gas. Bactobolamine is soluble in organic solvent DMSO. Bactobolamine is also soluble in water. We do not recommend storing the aqueous solution for more than one day.

Description

Bactobolamine is an immunosuppressant.¹ It inhibits IL-2 production by CTLL cells when used at a concentration of 200 µg/ml. *In vivo*, bactobolamine (200 mg/kg) prolongs heart allograft survival in MHC-compatible and MHC-incompatible rat pairings. It also prolongs survival in a rat liver allograft model and a canine kidney allograft model.
