Laboratory Procedures

DSPE-PEG(2000)-mannose is supplied as a solution in ethanol. A stock solution may be made by dissolving the DSPE-PEG(2000)-mannose in the solvent of choice, which should be purged with an inert gas. DSPE-PEG(2000)-mannose is soluble (10 mg/ml) in ethanol and slightly soluble (0.1-1 mg/ml) in DMSO and dimethyl formamide.

Description

DSPE-PEG(2000)-mannose is a PEGylated and mannosylated form of 1,2-distearoyl-sn-glycero-3-PE (1,2-DSPE; Item No. 15095) that has been used in the generation of liposomes and lipid nanoparticles (LNPs) for the delivery of peptides, oligodeoxynucleotides, and siRNA *in vitro* and *in vivo*.^{1,2} Fluorescently labeled LNPs containing DSPE-PEG(2000)-mannose selectively accumulate in the liver and spleen over the brain, lungs, heart, kidney, and pancreas in mice.² Immunization with liposomes containing DSPE-PEG(2000)-mannose and encapsulating human papilloma virus type 16 (HPV16) E7 peptide and CpG oligodeoxynucleotide as an adjuvant decrease tumor size, intratumoral CD4⁺ or CD8⁺ T cells, and intratumoral angiogenesis in a murine lung cancer model using TC-1 cells, which express HPV16 E6 and E7 peptides.¹
