Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

## Laboratory Procedures

Silydianin is supplied as a solid. A stock solution may be made by dissolving the silydianin in the solvent of choice, which should be purged with an inert gas. Silydianin is soluble in acetonitrile and methanol

## Description

Silydianin is a flavonolignan that has been found in *S. marianum* and has diverse biological activities.<sup>1-4</sup> It inhibits tyrosinase ( $IC_{50} = 2.6 \mu M$  for the mushroom enzyme) and scavenges DPPH (Item No. 14805) radicals in a cell-free assay ( $IC_{50} = 66.8 \mu M$ ).<sup>1,2</sup> Silydianin (100  $\mu M$ ) protects against cytotoxicity induced by allyl alcohol, carbon tetrachloride, paracetamol (acetaminophen; Item No. 10024), or D-galactosamine (Item No. 22981) in primary human hepatocytes.<sup>2</sup> It inhibits the proliferation of DU145 and PC3 prostate cancer cells when used at a concentration of 90  $\mu M$ .<sup>3</sup> Silydianin (1%) prevents methacholine-induced airway hyperresponsiveness (AHR) and reduces blood and bronchoalveolar lavage fluid (BALF) levels of eosinophils in an ovalbumin-sensitized mouse model of allergic asthma when administered via inhalation.<sup>4</sup>
