Description

Syringetin is a methylated flavonol that has been found in *G. biloba* and has diverse biological activities.¹⁻³ It inhibits α-glucosidase and scavenges radicals in a Trolox equivalent antioxidant capacity (TEAC) assay (IC₅₀s = 36.8 and 12.3 μM, respectively).^{1,3} Syringetin (50 μM) reduces the proliferation of, induces cell cycle arrest at the G₂/M phase in, and decreases cyclin D1 and COX-2 levels in, Caco-2 colorectal adenocarcinoma cells.² It increases the lifespan of *C. elegans* when used at a concentration of 100 μM.³
