PRODUCT INFORMATION

Dimethoate-d₆ Item No. 39260

CAS Registry No.: 1219794-81-6
Formal Name: phosphorodithioic acid, O,O-di(methyl-d₃)
S-[2-(methylamino)-2-oxoethyl] ester
MF: C₅H₆D₆NO₃PS₂
FW: 235.3
Chemical Purity: ≥98% (Dimethoate)
Deuterium Incorporation: ≥99% deuterated forms (d₁-d₆); ≤1% d₀
Supplied as: A solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Dimethoate-d₆ is intended for use as an internal standard for the quantification of dimethoate (Item No. 24246) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

Dimethoate-d₆ is supplied as a solid. A stock solution may be made by dissolving the dimethoate-d₆ in the solvent of choice, which should be purged with an inert gas. Dimethoate-d₆ is soluble in chloroform and DMSO.

Description

Dimethoate is an organophosphate pesticide.¹ It is acaricidal against Kanzawa spider mites (LC₅₀ = 7 ppm in an aqueous suspension). Dimethoate (50-200 μM) reduces motility and viability and induces abnormal morphology of rat sperm.² It also increases production of malondialdehyde (MDA) and reduces superoxide dismutase (SOD), catalase (CAT), and glutathione peroxidase (GPX) activities in rat epididymal sperm. *In vivo*, dimethoate (28 mg/kg per day) decreases sperm count, motility, and viability and increases the percentage of morphologically abnormal sperm in rats.³ Dimethoate also induces formation of carcinomas in the adrenal, thyroid, and pituitary glands of male and female rats as well as testicular atrophy, chronic renal disease, polyarteritis, and parathyroid hyperplasia in male rats.⁴ Formulations containing dimethoate have been used as insecticides and miticides in aquatic food production and agriculture.
