### Laboratory Procedures

NCT-02 is supplied as a solid. A stock solution may be made by dissolving the NCT-02 in the solvent of choice, which should be purged with an inert gas. NCT-02 is soluble in acetonitrile and DMSO.

### Description

NCT-02 is a degrader of cyclin K.<sup>1</sup> It reduces the levels of cyclin K in patient-derived colorectal cancer (CRC) cells in a concentration-dependent manner. NCT-02 inhibits cancer cell proliferation in CRC tissue samples isolated from the colon (IC<sub>50</sub>s = 0.9-20.6 μM), as well as from hepatic, lung, and rectal metastases (IC<sub>50</sub>s = 0.5-11.8, 1, and 1.4-38.4 μM, respectively). It decreases the levels of Ataxia-telangiectasia mutated kinase (ATM) and RAD51 in patient-derived CRC tissues when used at concentrations 0.7 and 0.5 μM, respectively. NCT-02 (3 μM) reduces the number of spheroids formed and induces poly(ADP-ribose) polymerase (PARP) cleavage in patient-derived CRC spheroid cultures.
