### Laboratory Procedures

Aldicarb-d<sub>3</sub> is intended for use as an internal standard for the quantification of aldicarb (Item No. 18466) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

### Description

Aldicarb is a carbamate pesticide.<sup>1</sup> It is an acetylcholinesterase (AChE) inhibitor with an IC<sub>50</sub> value of 5 μM.<sup>2</sup> Aldicarb induces mortality in the two-spotted spider mite (*T. urticae*) with an LC<sub>50</sub> value of 21 ppm in a slide-dip assay and in the nematode (*M. exigua*) with an LC<sub>50</sub> value of 24 μg/L.<sup>3,4</sup> It has been used to study CREB and acetylcholine signaling.<sup>5</sup> Formulations containing aldicarb have been used as pesticides in agriculture.
