### Laboratory Procedures

Brain Natriuretic Peptide-32 (BNP-32) (rat) (acetate) is supplied as a solid. A stock solution may be made by dissolving the BNP-32 (rat) (acetate) in water. We do not recommend storing the aqueous solution for more than one day.

### Description

BNP-32 is a peptide fragment of the cardiovascular hormone precursor proBNP.<sup>1</sup> It binds to natriuretic peptide receptors on rat vascular smooth muscle cells (IC<sub>50</sub> = 7.3 nM) and induces cGMP accumulation in the same cells (EC<sub>50</sub> = 170 nM). BNP-32 induces relaxation of norepinephrine-precontracted isolated rat aortic strips (EC<sub>50</sub> = 6.7 nM). It increases urine and urinary electrolyte excretion and induces hypotension in rats when administered at a dose of 3 µg/kg.
