Laboratory Procedures

Buccalin A (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the buccalin A (trifluoroacetate salt) in water. We do not recommend storing the aqueous solution for more than one day.

Description

Buccalin A is a neuropeptide that is found in gastropod motor neurons and is involved in neuromuscular signaling.¹ It reduces current-induced muscle contraction amplitude but not muscle relaxation rate in isolated and washed *A. californica* accessory radula closer (ARC) muscle fibers when used at a concentration of 10 nM. Buccalin A (10 μM) decreases the amplitude of inhibitory post-synaptic currents (IPSCs) in isolated and perfused voltage-clamped *A. californica* buccal ganglia.²
