### Laboratory Procedures

Mitochondrial fusion promoter M1 is supplied as a solid. A stock solution may be made by dissolving the mitochondrial fusion promoter M1 in the solvent of choice, which should be purged with an inert gas. Mitochondrial fusion promoter M1 is soluble in methanol and DMSO.

### Description

Mitochondrial fusion promoter M1 is a promoter of mitochondrial fusion.<sup>1</sup> It induces elongation of mitochondria in mitofusin-1 knockout (*Mfn1*<sup>-/-</sup>) or *Mfn2*<sup>-/-</sup> mouse embryonic fibroblasts (MEFs; EC<sub>50</sub>s = 5.3 and 4.42 μM, respectively) and protects against MPP<sup>+</sup>-induced mitochondrial fragmentation and cytotoxicity in SH-SY5Y cells when used at a concentration of 5 μM. M1 (1 μM) reduces apoptosis and inhibits decreases in testosterone levels induced by the organophosphate triphenyl phosphite in TM3 mouse Leydig cells.<sup>2</sup> *In vivo*, mitochondrial fusion promoter M1 (2 mg/kg) improves novel object recognition deficits induced by the antitumor antibiotic doxorubicin (Item No. 15007) in rats.<sup>3</sup>
