## Laboratory Procedures

CP-4 is supplied as a solid. A stock solution may be made by dissolving the CP-4 in the solvent of choice, which should be purged with an inert gas. CP-4 is slightly soluble (0.1-1 mg/ml) in ethanol and sparingly soluble (1-10 mg/ml) in DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of CP-4 can be prepared by directly dissolving the solid in aqueous buffers. CP-4 is slightly soluble (0.1-1 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

## Description

CP-4 is a fluorescent probe for mesenchymal stem cells.<sup>1</sup> It displays absorbance/emission maxima of 577/617 nm, respectively. CP-4 enhances FGF-induced neuronal differentiation of isolated human mesenchymal stem cells.
