### Laboratory Procedures

Maackiain is supplied as a solid. A stock solution may be made by dissolving the maackiain in the solvent of choice, which should be purged with an inert gas. Maackiain is soluble in acetonitrile and chloroform.

### Description

Maackiain is a cyclized isoflavonoid that has been found in *S. flavescens* and has anti-inflammatory and antiallergenic activities.<sup>1-3</sup> It inhibits increases in the levels of mRNA encoding the histamine H<sub>1</sub> receptor induced by phorbol 12-myristate 13-acetate (PMA; Item No. 10008014) in serum-starved HeLa cells when used at concentrations of 10, 20, or 30 μM and inhibits PMA-induced increases in the levels of mRNA encoding Il-4 in RBL-2H3 cells at 50 or 150 μM.<sup>2</sup> Maackiain decreases LPS-induced increases in nitric oxide (NO) production in RAW 264.7 macrophages (IC<sub>50</sub> = 27 μM).<sup>3</sup> It increases survival in a mouse model of sepsis induced by cecal ligation and puncture (CLP) when administered at doses of 2.5 or 5 mg/kg.<sup>1</sup> Maackiain (20 mg/kg per day) reduces the number of sneezes and the extent of nasal redness, swelling, and watery rhinorrhea in a rat model of allergies induced by toluene-2,4-diisocyanate (TDI).<sup>5</sup>
