Laboratory Procedures

Tri-GalNAc(OAc)3 (trifluoroacetate salt) is supplied as a solid. A stock solution may be made by dissolving the tri-GalNAc(OAc)3 (trifluoroacetate salt) in the solvent of choice, which should be purged with an inert gas. Tri-GalNAc(OAc)3 (trifluoroacetate salt) is sparingly soluble (1-10 mg/ml) in ethanol and DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of tri-GalNAc(OAc)3 (trifluoroacetate salt) can be prepared by directly dissolving the solid in aqueous buffers. Tri-GalNAc(OAc)3 (trifluoroacetate salt) is soluble (≥10 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

Description

Tri-GalNAc(OAc)3 is an intermediate in the synthesis of lysosome-targeting chimeras (LYTACs) with anticancer activity.¹
