Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

### Laboratory Procedures

Chenodeoxycholyl-cadaverine is supplied as a solid. A stock solution may be made by dissolving the chenodeoxycholyl-cadaverine in the solvent of choice, which should be purged with an inert gas. Chenodeoxycholyl-cadaverine is soluble ( $\geq$ 10 mg/ml) in ethanol and DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of chenodeoxycholyl-cadaverine can be prepared by directly dissolving the solid in aqueous buffers. Chenodeoxycholyl-cadaverine is slightly soluble (0.1-1 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

### Description

Chenodeoxycholyl-cadaverine is a polyamine bile amidate.<sup>1</sup> Chenodeoxycholyl-cadaverine has been used as a standard in the detection of chenodeoxycholyl-cadaverine in mammalian intestinal and fecal samples.
