PRODUCT INFORMATION

Cipecpofol

Item No. 40951

CAS Registry No.: 1637741-58-2
Formal Name: 2-[(1R)-1-cyclopropylethyl]-6-(1-methylethyl)-phenol
Synonym: HSK3486
MF: C₁₄H₂₀O
FW: 204.3
Purity: ≥98%
Supplied as: A neat liquid
Storage: -20°C
Stability: ≥2 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Cipecpofol is supplied as a neat liquid. A stock solution may be made by dissolving the cipecpofol in the solvent of choice, which should be purged with an inert gas. Cipecpofol is soluble (≥10 mg/ml) in ethanol and DMSO.

Description

Cipecpofol is a general anesthetic.¹ It binds to the GABA_A receptor when used at a concentration of 10 μM. Cipecpofol inhibits decreases in superoxide dismutase (Sod) levels, increases in NADPH oxidase (Nox) levels, and apoptosis induced by the β₁- and β₂-adrenergic receptor agonist isoproterenol (Item No. 15592) in H9c2 rat cardiomyocytes and reduces infarct size in a mouse model of isoproterenol-induced myocardial infarction.² It induces loss of righting reflex (LORR) in mice (ED₅₀ = 1.5 mg/kg).¹
