### Laboratory Procedures

2-(Morpholin-4-yl)ethane-1-sulfonamide is supplied as a solid. A stock solution may be made by dissolving the 2-(morpholin-4-yl)ethane-1-sulfonamide in the solvent of choice, which should be purged with an inert gas. 2-(Morpholin-4-yl)ethane-1-sulfonamide is slightly soluble (0.1-1 mg/ml) in ethanol and sparingly soluble (1-10 mg/ml) in DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of 2-(morpholin-4-yl)ethane-1-sulfonamide can be prepared by directly dissolving the solid in aqueous buffers. 2-(Morpholin-4-yl)ethane-1-sulfonamide is sparingly soluble (1-10 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

### Description

2-(Morpholin-4-yl)ethane-1-sulfonamide is a byproduct in the synthesis of diazo compounds.<sup>1</sup>
